

PNT2022TMID15636 - HTTP REQUEST

The screenshot displays the Node-RED web interface. On the left, a sidebar lists various nodes under the 'dashboard' category, including text input, button, dropdown, switch, slider, numeric, date picker, colour picker, form, text, gauge, chart, audio out, notification, and ui control. The main workspace shows a flow named 'Flow 1' with a 'Temperature Mode' node connected to a 'Lighton' node, which is then connected to a 'Lightoff' node. A 'GET /sensor' node is also present in the flow. The 'Edit http in node' dialog is open, showing the following configuration:

- Method: GET
- URL: /sensor
- Name: Name

The right sidebar shows the 'debug' console with a list of messages. The messages are filtered by 'all nodes' and show a sequence of messages from the 'iot-2/type/Microcontroller_Device_1/d/00002/evt/demo/fmt/json' node, each containing a 'msg.payload : number' value. The values shown are 11, 228, 38, 13, 171, 94, 6, 743, and 29.
